1. Purpose

This document reports the execution and outcome of the Operational Qualification (OQ) test suite for the JR Validated Environment Correlation Analysis Module, version 1.0. It provides objective evidence that all Corr scripts perform as specified in the OQ Validation Plan JR-VP-CORR-001 v1.0 under the defined test conditions.

This report records the test environment, execution results for all 50 test cases, and the formal OQ conclusion. Results are derived directly from the OQ evidence file produced by admin_corr_oq.

2. Scope

2.1 In Scope

- All 4 R scripts in repos/corr/R/ (jrc_corr_pearson, jrc_corr_spearman, jrc_corr_regression, jrc_corr_passing_bablok)
- Correct computation of correlation coefficients, regression coefficients, CI bounds, and p-values for valid inputs
- Numeric correctness assertions for exact linear data (Pearson r, OLS slope, intercept, R-squared)
- Correct rejection of invalid inputs with informative error messages
- Bypass-protection verification (RENV_PATHS_ROOT check)
- PNG output to ~/Downloads/

2.2 Out of Scope

- Infrastructure scripts in bin/ and admin/ (covered by JR-IQ-001)
- Performance qualification (PQ) with real production data
- Validation of R interpreter and third-party packages (ggplot2, grid)
- Statistical validation of the underlying methods (Pearson, Spearman, OLS, Passing-Bablok) — method references are cited in JR-VP-CORR-001 Section 3

9. OQ Conclusion

The Operational Qualification of the JR Validated Environment Correlation Analysis Module v1.0 is complete. All 50 test cases defined in JR-VP-CORR-001 were executed on 2026-03-31 and passed with no failures, no errors, and no deviations.

All 18 user requirements (UR-CORR-001 through UR-CORR-018) are covered by at least one passing test case. The OQ acceptance criteria stated in JR-VP-CORR-001 Section 10 are fully met.

The Correlation Analysis module is hereby declared OPERATIONALLY QUALIFIED and released for use in design verification activities in accordance with the JR Validated Environment quality system.
