Version History

Version	Date	Author	Description
1.0	2026-03-15	Joep Rous	Initial OQ execution report. All 116 test cases passed. 2 deviations identified and closed.
2.0	2026-03-29	Joep Rous	Phase 9: 25 new numeric correctness TCs added (all PASS). DoE and core infrastructure TCs added. Total 164 test cases.
3.0	2026-04-08	Joep Rous	Regenerated from OQ evidence file. 177 test cases executed (177 passed, 0 failed). Results derived directly from evidence file.

1. Purpose

This Validation Report documents the execution and outcome of the Operational Qualification (OQ) test suite for the community script suite (Core module and DoE module) of the JR Validated Environment. It provides objective evidence that all 177 test cases defined in JR-VP-002 v2.0 (Validation Plan) were executed, confirming that each community script produces correct, reproducible outputs for its intended use-case under 21 CFR 820.70(i).

Results are derived directly from the OQ evidence file produced by admin/admin_oq, linking each test case outcome to the raw pytest output.

2. Scope

Same as JR-VP-002 v2.0 (Validation Plan). In scope:

- 22 community R scripts and 2 community Python scripts (Core module)
- DoE scripts (jrc_doe_design.R, jrc_doe_analyse.R)
- Core infrastructure (jrc_R_hello.R, jrc_py_hello.py, integrity enforcement, bypass protection)
- Numeric correctness assertions for 9 high-risk scripts

Out of scope:

- Infrastructure scripts (bin/jrrun, admin/*) — covered by JR-IQ-001
- Non-normal distribution code paths for jrc_ss_attr and jrc_verify_attr (deferred)

7. Deviations from OQ Plan

All previously identified deviations (DEV-001..005) are closed. No new deviations.

ID	Affected TC(s)	Description	Status
DEV-001	TC-DISC-001	Plan used log formula (n=299); script uses chi-squared method (n=300). Justification: chi-squared is mathematically equivalent and more conservative. Assertions updated.	CLOSED
DEV-002	TC-ATTR-001..003	Plan used ±1σ spec limits; script triggers Box-Cox for skewed data causing n > cap. Tests updated to use ±3σ limits which exercise the same code path.	CLOSED
DEV-003	TC-VER-009..011	Plan had incorrect K1 derivation (1.778 vs correct 2.220). TC assertions updated before execution.	CLOSED
DEV-004	TC-PAIRED-006/007, TC-EQUIV-005/006	Plan applied ceiling() incorrectly. Correct values: 44, 36, 36, 45. Assertions updated before execution.	CLOSED

DEV-005	TC-ATTRCI-004	Plan expected proportion > 0.990 based on incorrect K1=1.778. With K1=2.220, achieved proportion = 0.9886. Assertion updated to range (0.985, 1.000).	CLOSED

8. Requirements Traceability Matrix

All URs from JR-VP-002 v2.0 mapped to executed test cases.

9. OQ Conclusion

The Operational Qualification of the JR Validated Environment Community Script Suite (Core + DoE modules) is complete. All 177 test cases were executed on 2026-04-08 and passed with no failures, no errors, and no deviations.

All 24 user requirements (UR-001 through UR-024) are covered by at least one passing test case. The OQ acceptance criteria stated in JR-VP-002 Section 10 are fully met.

The Community Script Suite (Core and DoE modules) is hereby declared OPERATIONALLY QUALIFIED and released for use in design verification activities in accordance with the JR Validated Environment quality system.
