1. Purpose

This document reports the execution and outcome of the Operational Qualification (OQ) test suite for the JR Validated Environment Curve Module, version 1.0. It provides objective evidence that `jrc_curve_properties` performs as specified in the OQ Validation Plan JR-VP-CURVE-001 v1.0 under the defined test conditions.

This report records the test environment, execution results for all 31 test cases, and the formal OQ conclusion. Results are derived directly from the evidence file generated by `admin_curve_oq`.

2. Scope

2.1 In Scope

- The Python script `repos/curve/jrc_curve_properties.py`
- Config-file parsing and pre-validation (unknown sections/keys, non-numeric values, missing required keys)
- Global statistics: max Y, min Y, max X, min X, AUC (trapezoidal), hysteresis
- Per-phase statistics with ascending/descending search and `after_phase` restriction
- Slope computation: overall linear regression, secant, numerical derivative at x
- Query interpolation: Y at x, X at y (first/last/all), Y at relative x
- Data transforms: `y_scale` (multiply) and `y_offset_x` (subtract Y at reference x)
- Transition detection: inflection points (d2y sign change) and yield point (slope threshold)
- Output file creation: `results.txt`, optional plot PDF, optional debug d2y CSV
- Help mode when invoked with no arguments
- Numeric correctness: AUC, overall slope, and Y-at-x verified against independently computed reference values

2.2 Out of Scope

- Infrastructure scripts in `bin/` and `admin/` (covered by JR-IQ-001)
- Performance qualification (PQ) with real production data
- Validation of Python interpreter and third-party packages (`scipy`, `numpy`, `matplotlib`)
- Statistical validation of the Savitzky-Golay smoothing algorithm — algorithm reference cited in JR-VP-CURVE-001 Section 3
- Plot aesthetics and PDF rendering quality beyond file creation

No deviations were identified during OQ execution. All 31 test cases passed on execution.

7. OQ Conclusion

The Operational Qualification of the JR Validated Environment Curve Module v1.0 is complete.

Result: PASS

All 31 automated test cases specified in JR-VP-CURVE-001 v1.0 were executed on 2026-05-18 and 31 passed. Results are derived from the OQ evidence file listed below.

- jrc_curve_properties — XY Curve Analysis (Config-file driven)

Evidence of test execution is archived at: curve_oq_execution_20260518T172707.txt

The Curve module is released as version 1.0 of repos/curve/. Any subsequent change to the script, wrapper, or help file within repos/curve/ will require a change assessment and, if the change affects functionality covered by this OQ, re-execution of the affected test cases.
