Version History

Version	Date	Author	Description
1.0	2026-04-19	Joep Rous	Initial OQ execution report. All 57 test cases passed. No deviations.
2.0	2026-05-18	Joep Rous	Updated for Shelf Life module v2.0. Added --report DV report TCs for all 5 scripts (Q10-011..013, ARR-011..013, LIN-017..019, POOL-011..013, EXT-012..014). 72 / 72 tests passed.

1. Purpose

This document reports the execution and outcome of the Operational Qualification (OQ) test suite for the JR Validated Environment Shelf Life & Degradation Analysis Module, version 2.0. It provides objective evidence that all Shelf Life scripts perform as specified in OQ Validation Plan JR-VP-SHELF-001 v2.0 under the defined test conditions.

This report records the test environment, execution results for all 72 test cases, and the formal OQ conclusion. Results are derived directly from the evidence file generated by admin_shelf_life_oq.

2. Scope

2.1 In Scope

- All 5 R scripts in repos/shelf_life/R/ (jrc_shelf_life_q10, jrc_shelf_life_arrhenius, jrc_shelf_life_linear, jrc_shelf_life_poolability, jrc_shelf_life_extrapolate)
- Correct computation of AF and real-time equivalent via Q10 (ASTM F1980) and Arrhenius (ISO 11607 / ICH Q1E) methods; numerical correctness verified by independent Python arithmetic
- Correct linear degradation modelling: Brown-Forsythe test, OLS regression, shelf life estimation as CI of predicted mean crossing the specification limit (ICH Q1E)
- Correct --transform log behaviour: log-scale OLS fit with CI back-transformed via exp()
- Correct ICH Q1E batch poolability: two-step ANCOVA at $\alpha=0.25$; FULL/PARTIAL/DO NOT POOL decision
- Correct extrapolation with transform-aware CI back-transformation; ICH Q1E 50% warning and 100% hard stop
- Correct rejection of invalid inputs; bypass-protection verification (RENV_PATHS_ROOT check)
- PNG and model CSV output to ~/Downloads/

2.2 Out of Scope

- Infrastructure scripts in bin/ and admin/ (covered by JR-IQ-001)
- Performance qualification (PQ) with real product stability data
- Validation of R interpreter and third-party packages (ggplot2, nlme)
- Statistical validation of the underlying methods (Arrhenius kinetics, ICH Q1E poolability rules, OLS inference) — see JR-VP-SHELF-001 Section 3 for references

6. Deviations

No deviations were identified during OQ execution. All 72 test cases passed.

7. OQ Conclusion

The Operational Qualification of the JR Validated Environment Shelf Life & Degradation Analysis Module v2.0 is complete.

Result: PASS

All 72 automated test cases specified in JR-VP-SHELF-001 v2.0 were executed on 2026-05-18 and 72 passed. Results are derived from the OQ evidence file listed below.

- jrc_shelf_life_q10 — Accelerated Ageing via Q10 Method (ASTM F1980)
- jrc_shelf_life_arrhenius — Accelerated Ageing via Arrhenius Kinetics (ISO 11607 / ICH Q1E)
- jrc_shelf_life_linear — Linear Degradation Model with Shelf Life Estimation (ICH Q1E)
- jrc_shelf_life_poolability — ICH Q1E Batch Poolability Analysis (Two-Step ANCOVA)
- jrc_shelf_life_extrapolate — CI Projection to Target Time with Transform Support

Evidence of test execution is archived at: shelf_life_oq_execution_20260518T172824.txt

The Shelf Life & Degradation Analysis module is released as version 2.0 of repos/shelf_life/. Any subsequent change to the scripts, wrappers, or help files within repos/shelf_life/ will require a change assessment and, if the change affects functionality covered by this OQ, re-execution of the affected test cases.
