Version History

Version	Date	Author	Description
1.0	2026-03-24	Joep Rous	Initial OQ execution report. All 40 test cases passed. No deviations.
2.0	2026-05-18	Joep Rous	Updated for CAP module v2.0. Added numeric correctness TCs (N-014..018) and --report PV report TCs (N-019..021, NN-014..016, S-015..017). 54 / 54 tests passed.
3.0	2026-10-01	Joep Rous	jrscripts v5.0.0, code review 2026-10: re-execution of the full suite against the revised validation plan. 58 / 58 tests passed.

1. Purpose

This document reports the execution and outcome of the Operational Qualification (OQ) test suite for the JR Validated Environment Process Capability Module, version 2.0. It provides objective evidence that all Cap scripts perform as specified in the OQ Validation Plan JR-VP-CAP-001 v2.0 under the defined test conditions.

This report records the test environment, execution results for all 58 test cases, and the formal OQ conclusion. Results are derived directly from the evidence file generated by admin_cap_oq.

2. Scope

2.1 In Scope

- All 3 R scripts in repos/cap/R/ (jrc_cap_normal, jrc_cap_nonnormal, jrc_cap_sixpack)
- Correct computation of Cp, Cpk, Pp, Ppk, Cpm for normally distributed data
- Correct computation of Pp and Ppk via percentile method for non-normal data
- Correct six-panel report generation by jrc_cap_sixpack
- Correct rejection of invalid inputs with informative error messages
- Bypass-protection verification (RENV_PATHS_ROOT check)
- PNG output to ~/Downloads/
- Numeric correctness: Cpk, Cp, Ppk verified against independently computed reference values for analytical datasets

2.2 Out of Scope

- Infrastructure scripts in bin/ and admin/ (covered by JR-IQ-001)
- Performance qualification (PQ) with real production data
- Validation of R interpreter and third-party packages (ggplot2, grid)
- Statistical validation of the underlying methods (MR sigma estimation, percentile method) — method references are cited in JR-VP-CAP-001 Section 3

6. Deviations

No deviations were identified during OQ execution. All 58 test cases passed.

7. OQ Conclusion

The Operational Qualification of the JR Validated Environment Process Capability Module v2.0 is complete.

Result: PASS

All 58 automated test cases specified in JR-VP-CAP-001 v2.0 were executed on 2026-10-01 and 58 passed. Results are derived from the OQ evidence file listed below.

- jrc_cap_normal — Process Capability Analysis (Normal Distribution)
- jrc_cap_nonnormal — Process Capability Analysis (Non-Normal, Percentile Method)
- jrc_cap_sixpack — Process Capability Sixpack (Six-panel report)

Evidence of test execution is archived at: cap_oq_execution_20261001T170755.txt

The Process Capability module is released as version 2.0 of repos/cap/. Any subsequent change to the scripts, wrappers, or help files within repos/cap/ will require a change assessment and, if the change affects functionality covered by this OQ, re-execution of the affected test cases.
