1. Purpose

This document reports the execution and outcome of the Operational Qualification (OQ) test suite for the JR Validated Environment Statistical Process Control Module, version 2.0. It provides objective evidence that all SPC scripts perform as specified in the OQ Validation Plan JR-VP-SPC-001 v2.0 under the defined test conditions.

This report records the test environment, execution results for all 89 test cases, and the formal OQ conclusion. Results are derived directly from the evidence file generated by `admin_spc_oq`.

2. Scope

2.1 In Scope

- All 5 R scripts in `repos/spc/R/` (`jrc_spc_imr`, `jrc_spc_xbar_r`, `jrc_spc_xbar_s`, `jrc_spc_p`, `jrc_spc_c`)
- Shewhart control chart computations with 8 Western Electric rules
- PNG output to `~/Downloads/`
- User-specified control limit override (`--ucl` / `--lcl` flags)
- Correct rejection of invalid inputs with informative error messages
- Bypass-protection verification (`RENV_PATHS_ROOT` check)
- Numeric correctness: control limits verified against independently computed reference values using Shewhart constants ($d_2=1.128$, $D_4=3.267$)
- OOC observation flagging — flagged subgroup or individual identified with rule number
- IN CONTROL / OUT OF CONTROL verdict for stable and out-of-control datasets

2.2 Out of Scope

- Infrastructure scripts in `bin/` and `admin/` (covered by JR-IQ-001)
- Performance qualification (PQ) with real production data
- Validation of R interpreter and third-party packages (`ggplot2`, `qcc`)
- Statistical validation of the underlying control chart theory — method references are cited in JR-VP-SPC-001 Section 3

9. OQ Conclusion

The Operational Qualification of the JR Validated Environment Statistical Process Control Module v2.0 is complete.

Result: PASS

All 89 automated test cases specified in JR-VP-SPC-001 v2.0 were executed on 2026-10-01 and 89 passed. Results are derived from the OQ evidence file listed below.

- jrc_spc_imr — I-MR (Individuals & Moving Range) Chart
- jrc_spc_xbar_r — X-bar & R (X-bar and Range) Chart
- jrc_spc_xbar_s — X-bar & S (X-bar and Standard Deviation) Chart
- jrc_spc_p — P-Chart (Proportion Nonconforming)
- jrc_spc_c — C-Chart (Count of Defects per Unit)

Evidence of test execution is archived at: `spc_oq_execution_20261001T171601.txt`

The Statistical Process Control module is released as version 2.0 of `repos/spc/`. Any subsequent change to the scripts, wrappers, or help files within `repos/spc/` will require a change assessment and, if the change affects functionality covered by this OQ, re-execution of the affected test cases.
